

How was Building 59 Demolished?

Concrete saws were used to cut building walls and floors into blocks to minimize contamination release

Large crane with 120 foot boom was used to remove concrete blocks.

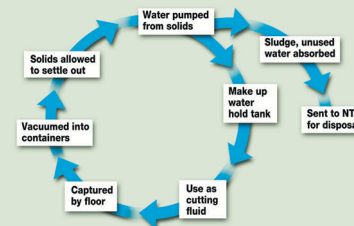

Each block was wrapped

Blocks were transported to Nevada Test Site for disposal

Water Recycling at Building 59

Water was used to cool the concrete saw blades. The water was captured and reused to minimize contamination and reduce waste.

Ruben Barroso and Neil Chisolm celebrate the completion of the job
